

AN HYDRAULIC PUMP FOR THE TERRITORIES

55 floods have hit Italy in the last 5 years

14 of these in the first half of 2023

with tens of billions of damages.

ASSORISORSE

**has organized an operative, concrete and phased
fundraising**

**for the purchase of an innovative high-power water-pump,
in collaboration with the Municipality of Ravenna and
the no-profit organization Amici della Terra.**

**A system to be used by the Fire Department,
capable of disposing of large masses of water and available for
emergencies throughout Italy and Europe**

FUNDRAISING

THE HYDRAULIC PUMP

WHAT

A diesel-powered pumping unit consisting of hydraulically driven portable submersible pumps that together can extract up to 50,000 litres/min of water.

HOW

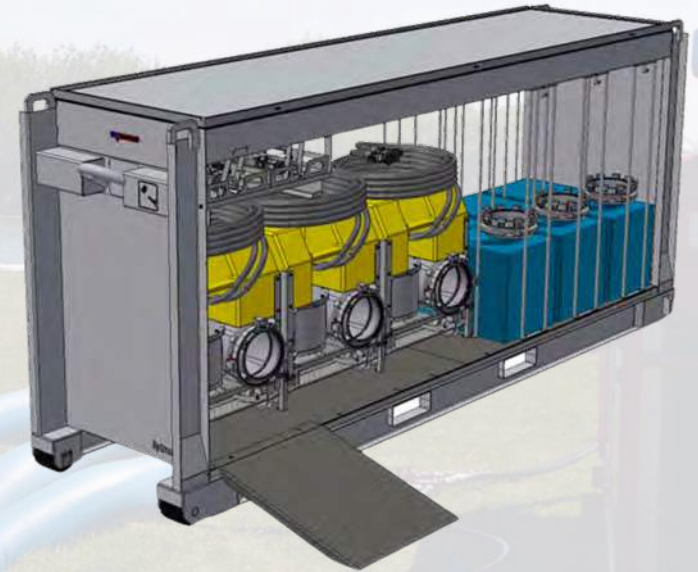

The system enables the suction and disposal of large masses of water even in situations with significant difference in surface elevation. The length of the hydraulic hoses guarantees quick and easy access to ponds, canals, basins and flooded areas.

TRANSPORT

The entire system is loaded on a stainless steel frame suitable for truck transport and easily unloaded with a skid or an hydraulic arm; it is also suitable for helicopter transport.

COSTS

The cost of the equipment is around 300,000 euros.
